

## PAME - Subsea Valve Support Base

Quadro was tasked by Petroleum & Mining Engineering (PAME) to provide detailed fabrication drawings for an Subsea Valve Support Base, from the engineering drawings supplied by their client.

The prime function of these drawings was to allow for cutting of steel plate & members, fabrication of the in-

dividual weldments and subsequent assembly of the completed valve support base.

The quality & details of the drawings provided allowed PAME to fabricate the valve support base very efficiently as there were no interpretation issues with the drawings.
