

PAME - Offshore Explosives Container

Quadro was tasked by [Petroleum & Mining Engineering \(PAME\)](#) to design & provide detailed fabrication drawings for an Offshore Explosives Container. The design was to be in accordance with AS 2187.1, but also be based around PAME's existing DNV approved Offshore lifting frame, to allow it to be certified as an offshore lifting device.

These Offshore Explosives Containers are also available for hire, in several sizes, through PAME's specialised offshore container & lifting basket hire division - [Lodios](#).
