

QANTAS - Scissor Lift Trucks

In order to meet the current Worksafe WA requirements, a number of scissor lift trucks required detailed site measurement and thickness testing to allow them to be modelled and drawn in detail (the scissor lift mechanisms and bodies had been manufactured by a variety of companies and no detailed drawings were available to QANTAS).

These models and drawings were then used by a transport specialist engineering company to conduct a detailed engineering analysis to determine their compliance with the current Worksafe WA requirements.
