

## Ship Fitted Saturated Dive System

Due to the shipyards requirement for the entire dive system to be supplied as a 3D model, including the kilometres of 3/8" to 1" instrument lines, Quadro was commissioned by an international saturated dive system supplier to compile this project in SolidWorks.

As our client uses a mix of 2D & 3D CAD packages, we were able to utilise all of the equipment that they already had 3D models for.
