

Mine Site Fueling Installations

Using SolidWorks®, we have created detailed models and fabrication drawings for a huge variety of self-bunded fuel and lube oil storage tanks, plus self-bunded exploration fuel trailers.

These tanks are typically used throughout the mining industry for both temporary and permanent fuelling and vehicle maintenance facilities—varying from single tanks with diesel driven dispensing equipment for remote, temporary works or exploration, through to million litre multi-tank installations to support full-time mining or marine operations.
